

SAFER. SMARTER. CONNECTED.

The most advanced vision technology and connected vehicle platform available.

Road-iQ is more than a basic recording system, because today's fleet operators need more protection than a basic recorder can offer. Approximately one-third of truck-car accidents are side and rear collisions that most systems don't "see". Road-iQ allows for 360 degree recording and makes side and rear blind spots viewable to drivers to help them make safer driving decisions. Road-iQ also records continuously to protect your investment from theft and damage **most systems miss**. When combined with unparalleled remote connectivity, Road-iQ is available when you need it most. Why risk missing that critical event?

Real Road-iQ footage of a side blind spot crash

Road-iQ Key Features and Benefits

- See and record 360 degrees around your vehicle. Road-iQ has flexibility to integrate up to 7 cameras for coverage as needed: front facing, driver facing, side blind spot and rearview tractor and trailer cameras.
- Continuous recording captures footage of events, even when there is no "triggered" incident. This gives peace of mind that whatever the event, it will always be recorded for driver exoneration.
- Eliminates false "flagged" events - instead of only relying on an accelerometer, Road-iQ's J1939 integration gives the most accurate reading of events such as hard braking and provides searchable event video content.
- NetHub provides 4G LTE connectivity and Wi-Fi hotspot for uploading video from all cameras and viewing live video feed from your online portal via any smart device or PC.
- Dash mounted iPad allows for easy in-cab access to real-time camera views, immediate playback of clips and reliable vehicle diagnostic information. This combination of active and passive safety is unmatched in the industry.

Why Road-iQ?

Road-iQ Advantage

Dynamic Drive Views

Camera views automatically switch to see exactly what you need to see when on the road.

Advanced Video Recording

Events of vehicle sensor data flagged by J1939 harness and/or by driver via tablet for later viewing.

Remote Video Surveillance

Remotely monitor your vehicle's live camera views in real-time.

Up to 7 Cameras

See live camera views and blind spots around your truck in real-time via the in-vehicle tablet.

Vehicle Diagnostics

Fault descriptions provide you with vehicle data to avoid breakdowns.

GPS Location

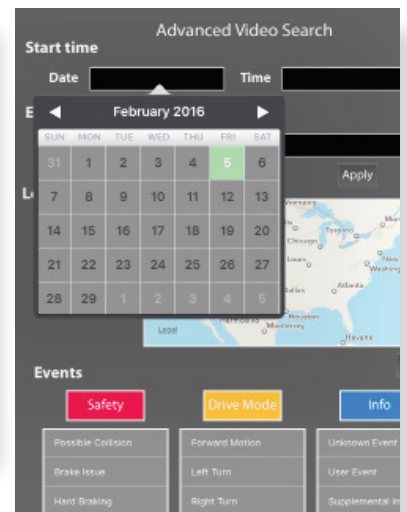

Remotely view your vehicle(s) geolocation and trip history, from anywhere.

Turn signals trigger relevant iPad display for real-time blind spot viewing

Remotely view live video streaming around your vehicle through the Road-iQ portal

Search videos by date, time or event
